

Group 1 - Wine

We want to investigate prices of red and white wines in the United States. We could potentially investigate red wine versus white wine pricing, pricing by region, ratings by region, and possibly some investigation into food pairings or grape varieties.

We will be web scraping from Vivino and Total Wine websites. We will need to see if the data fluctuates by day and which categories provide the best data to use.

Inspired by the wino of the group. The daily struggle of finding economical wine choices without sacrificing quality is a genuine struggle. As a team we would like to all increase our knowledge of affordable but tasty wines. Even if one of our members has not been able to purchase wine yet.

Data Sources:

1. Vivino
2. Total Wine

Data Tables:

1. Wine type
2. Wine price
3. Seller website (maybe)

Delegation of duties:

1. Webscraping – Will + team
2. Dataframing – Shaunghnessy, Brandon + team
3. Write up – team
4. EDA – Brenna + team
